云南大学数学与统计学院 上机实践报告

课程名称: 近代密码学实验	年级: 2015 级	上机实践成绩:
指导教师: 陆正福	姓名: 刘鹏	
上机实践名称: 古典加密技术实验	学号: 20151910042	上机实践日期: 2018-03-20
上机实践编号: No.02	组号:	上机实践时间: 23:05

一、实验目的

熟悉古典密码学的思路和方法。

二、实验内容

- 1. 编程实现古典密码学的主要体制和算法
- 2. 编程实现古典密码学的主要分析方法。

三、实验平台

```
Windows 10 1703 Enterprise (Edit Reports); 
SageMath version 8.1, Release Date: 2017-12-07; 
Ubuntu 17.10 x86-64 (take Experiments) 
Xshell 5 Build 1339.
```

四、实验记录与实验结果分析

1题

在 SageMath 下,编程实现以 Caesar 加密为代表的古典加密方法(对字母表进行变换)。参考 P.501 B.1 第 2 章:传统加密技术[1]。

Solution:

程序代码

```
1 # in the English alphabet
2
3
    def num to char(x):
4
       return en_alphabet[x % 26]
5
    def CaesarEncrypt(k, plaintext):
6
7
       ciphertext = ""
8
       for j in xrange(len(plaintext)):
9
           p = plaintext[j]
           if is alphabetic char(p):
10
11
               x = (k + char_to_num(p)) % 26
12
               c = num_to_char(x)
13
           else:
14
               c = p
15
           ciphertext += c
       return ciphertext
16
17
   def CaesarDecrypt(k, ciphertext):
       plaintext = ""
18
```

```
19
       for j in xrange(len(ciphertext)):
20
          c = ciphertext[j]
          if is alphabetic char(c):
21
              x = (char_to_num(c) - k) % 26
22
              p = num_to_char(x)
23
          else:
24
25
              p = c
          plaintext += p
26
       return plaintext
27
28
29
   def BruteForceAttack(ciphertext, keyword=None):
       for k in xrange(26):
30
          plaintext = CaesarDecrypt(k, ciphertext)
31
          if(None==keyword) or (keyword in plaintext):
32
33
              print "key", k, "decryption", plaintext
34
       return
35
   """-----"""
36
37
38
39 k = 6; plaintext = "Get me a vanilla ice cream, make it a double.";
   print CaesarEncrypt(k, plaintext)
40
41
42 k = 15; plaintext = "I don't much care for Leonard Cohen.";
   print CaesarEncrypt(k, plaintext)
43
44
45 k = 16; plaintext = "I like root beer floats.";
46 print CaesarEncrypt(k, plaintext)
47
   """-----have a try-----"""
48
49
50 k = 12; ciphertext = "nduzs ftq buzq oazqe";
51 print CaesarDecrypt(k, ciphertext)
52
53 k = 3; ciphertext = "fdhvdu qhhgv wr orvh zhljkw.";
54 print CaesarDecrypt(k, ciphertext)
55
56 k = 20; ciphertext = "ufgihxm uly numnys.";
```

程序代码 1

运行结果

```
oot@Newton-PC-1:/home/newton/Desktop/Sage# sage
 SageMath version 8.1, Release Date: 2017-12-07

运行结果 1

程序分析

这几段简单的代码是用 Python 2 写成的。凯撒加密作为古典密码中比较典型的一种的同时,也是人类已有历史记录中最早的一个。

SageMath 的运行和 Python 基本一致,就是在当前工作目录下存放一些文件,可以通过%run foobar.py 这种语句进行运行。

六、实验体会

SageMath 与 Python 2 兼容^[2],使得实验代码书写相对简单。但是在 sage 下没有文本编辑器,也没有 IDE,调试起来相对麻烦一点,要在终端里用 vi 编辑器写好再调试。
